

HYBRID™ BOX

The Perfect
Combination of
Paper and
Plastic

Patented

Chokoku Plast Corp.
<https://www.chokokuplast.com>

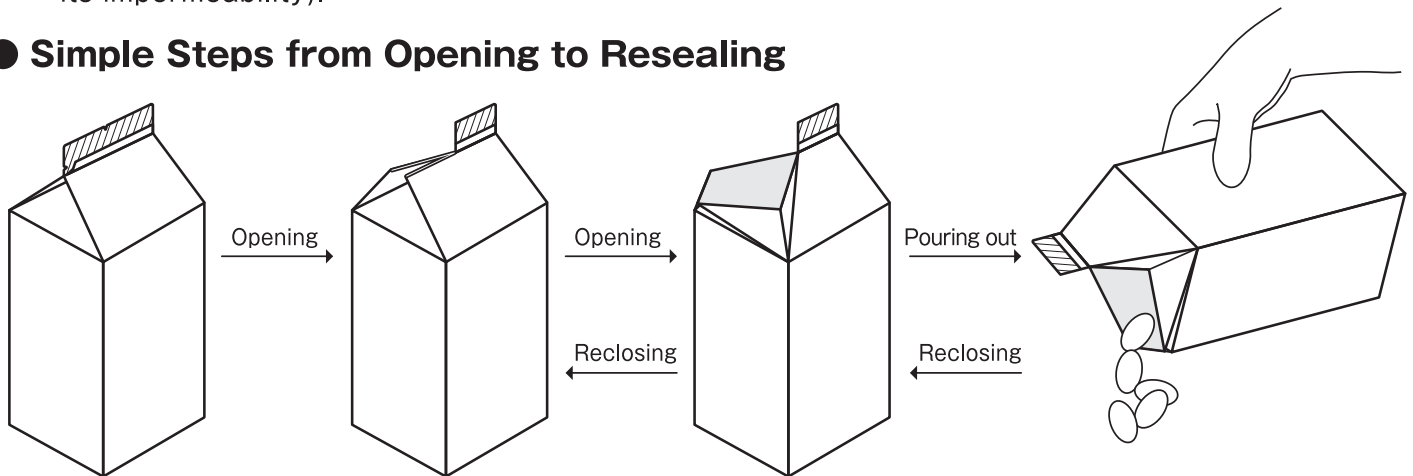

● What Is the Hybrid Box?

A gable top composite container that is made of both paper and plastic film.

● Characteristics

- As the paper and the inner pouch (plastic film) are integrated, Hybrid Box can save you the trouble of putting the inner pouch back inside the paper box after opening the film protruding from the top.
- As Hybrid Box is a container with a gable top, the paper and film are opened together and the contents can be easily poured out.
- You can easily reclose the container by simply pushing back the protruding triangular part.
- As the bottom of the film is kept raised inside the box, it increases the cushioning effect on contents sensitive to impacts.
- Hybrid Box is a new type of eco-friendly container that is made of at least 50% paper.
- After use, the outer paper and inner film can be separated and disposed of separately.
- Hybrid Box is a type of packaging that combines the benefits of a paper box (aesthetic appearance when displayed in a store) and the benefits of plastic film (multifunctionality such as its impermeability).

● Simple Steps from Opening to Resealing

● Used with

Cereals, snacks, potato chips, pet food, etc.

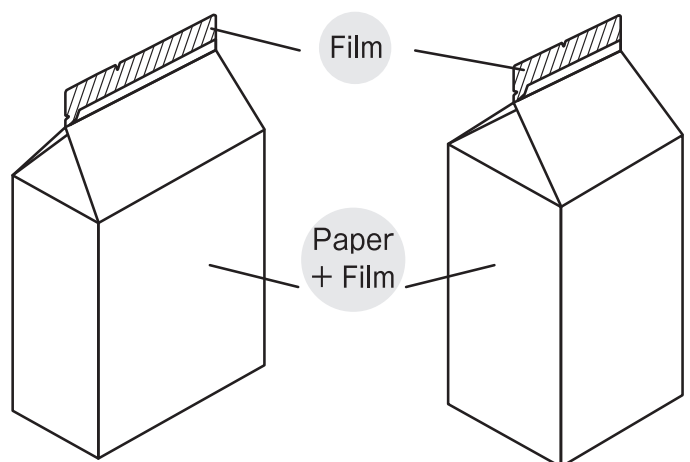

● Example of Material Composition

Outside: Paper

Inside: Single-sided heat-sealing of OP/VMCPP

● Rectangular Type

● Square Type
