● What Is VUT?

VUT, which stands for Volume Up Tray, is a container that creates a sense of volume to the contents by making the facing surfaces of the flanges a curved shape (trapezoidal, triangular, circular, etc.).

In the ready-meals industry, which has recently gained popularity among general households for the likes of side dishes and lunch boxes, the Volume Up Tray was developed to improve the product's sense of volume and to encourage customers to buy the respective product when displayed in stores.

● Characteristics

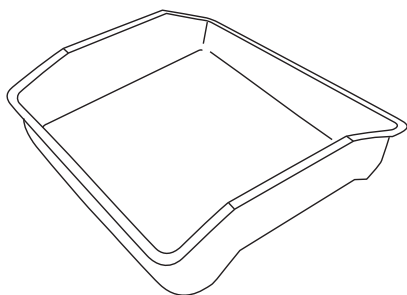

- A sealed container that heat-seals the film used as the lid material onto the flanges of the tray.
- The heat-sealed film on top ensures that there is no leaking and that it opens easily.
- The Volume Up Tray can also support MAP (Modified Atmosphere Packaging) and achieve a longer product life.
- The Volume Up Tray has a special stackable structure while keeping the bottom flat.
- No shrink wrap packaging is required, reducing the impact on the environment.
- By combining EcoLook with MicroSteamer^{PAT} (a product developed by Chokoku Plast), self-venting is possible when heating the container in a microwave oven.
- We suggest our exclusive heat-sealing system that uses a tray sealer.

● Used with

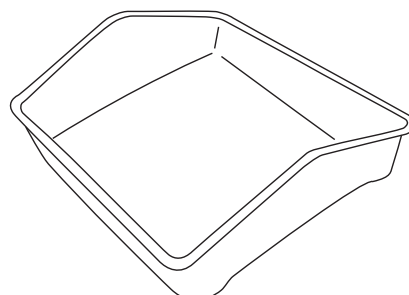

Side dishes, lunch boxes, pasta, desserts, meat, fruits, vegetables, etc. (for over-the-counter and home-cooked meals)

● Types

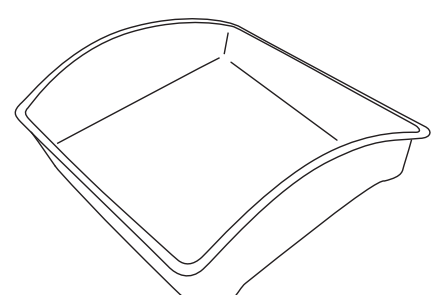

Trapezoidal

Triangular

Circular
