EDGE STAND In-Line System

Stand-Up Pouches with Skirt Base

In-line System

EdgeStand

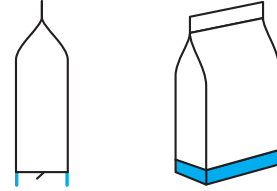

This In-Line Method Joins Our Pillow Filling and Packaging System for EdgeStand Packaging!

CHOKOKU
PLAST

● What Is EdgeStand?

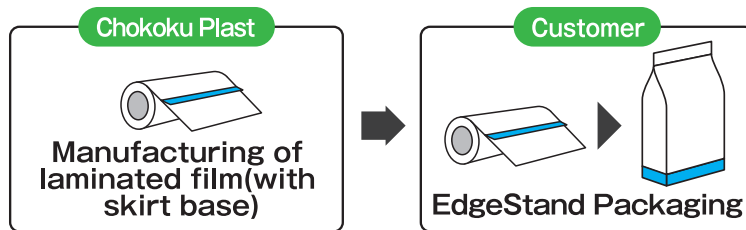

EdgeStand is a stand-up pouch with a unique “side gusset + skirt” structure in which the skirt-like base on the bottom of the pouch props it up like a stand to enhance the packaging’s self-standing nature. It is also possible to fill and wrap the packaging from a film roll on a pillow packaging machine. This in-line system makes it possible for customers to perform everything from adding the skirt base to filling and packaging.

● Two Pillow Packaging Systems

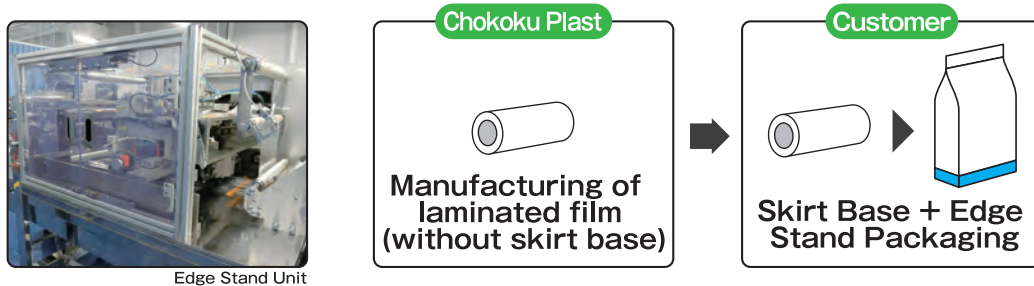

1. Conventional method = off-line method

Using an off-line base equipment, Chokoku Plast creates skirt bases installed perpendicular to the laminated film’s direction of movement. This film with a skirt base is supplied to the customer and is made into EdgeStand packaging on a vertical or horizontal pillow packaging machine.

2. New method = in-line method **NEW**

The newly developed EdgeStand Unit, which handles the adding of skirt bases to the packaging, will be installed in-line at the upstream position of the pillow packaging machine. Integrated production from the adding of a skirt base right through to completing the EdgeStand packaging can be done by the customer (currently, in the case of horizontal pillow packaging machines) when using the supplied laminated film (without skirt base).

* In either method 1 or 2 above, the laminated film (1 = with skirt base, 2 = without skirt base) will be supplied by Chokoku Plast or its licensee.
